Task: Make a homepage for a bakery

Functionalities:
1) Add 4 different products (You can add as many as you like)
2) For each product,
    a) Add description
    b) Add to cart
    c) Delete from cart
3) Create an option for checkout. Upon clicking checkout, the right payload must be logged to the console.
4) Create some hover effects for the product thumbnails (optional)
5) Add basic routing – make the browser's back button work properly etc.

Create a github repository of the project using ReactJS and write proper documentation to run it locally.

Focus Areas:
1) Responsiveness of the site
2) State Management
3) Make the site agnostic of browsers and devices

BONUS POINT: Show us your creativity. Create any feature that you can think of.
